

Aortic Highlights Course: March 16-17, 2023

Official letter from the course directors

Dear Colleagues,

On behalf of Edwards Lifesciences and our fellow speakers, we are pleased to invite you to take part in the upcoming Hybrid Aortic Highlights Course that will be held on March 16-17, 2023. This new course will be entirely dedicated to the hot topics and latest research surrounding the treatment of aortic valve disease. More precisely, the course will include five unique sessions that will cover:

- The latest trends in the management of aortic valve disease, where we will explore the different surgical approaches available today and how to make the right choice for the patient.
- The Achilles heels of AVR, where we will investigate the limitations and challenges that still exist today in the field of aortic valve replacement
- The role of gender regarding the management of aortic diseases: prognosis, outcomes, and responsible factors
- A review of current data regarding the durability of bioprosthetic valves while considering the concept of lifetime management in TAVI/SAVR, where we will discuss the decision-making process regarding the age of the patient versus their life expectancy.
- A selection of topics that invite the faculty and the audience to debate on current hot topics in AVR

Throughout the course, you will not only have the privilege of learning from some of Europe's leading experts in aortic valve surgery, but you will also have the chance to directly interact with the faculty via Q&A sessions. All the experts will be mobilized in a professional TV studio, where a number of digital features will be included so you can fully enjoy the experience, whether you participate online or in-person.

Whether in-person or online, we look forward to answering your questions and bringing the most up-to-date scientific information straight to you.

Sincerely,
